8. In the application, the aim of the network was described as follows: "the objective is to create a research environment for Nordic research groups and individuals interested in Wittgenstein's philosophy and approaches to different problems and areas in philosophy inspired by his thought. The aim is especially to strengthen and co-ordinate the research possibilities and research education of doctoral students and young scholars. The target of the network is first and foremost to strengthen the Nordic co-operation within the field and to establish a research community which provides the critical mass needed to be of international significance and interest."
